FREE TECH SUPPORT FAST SERVICE SUPPORT

- Please use the specified power supply to connect.
- Do not attempt to disassemble the camera; in order to prevent electric shock, do not remove screws or covers.
- There are no user-serviceable parts inside. Please contact the nearest service center as soon as possible if there is any failure.
- Avoid from incorrect operation, shock vibration, heavy pressing which can cause damage to product.
- Do not use corrosive detergent to clean main body of the camera. If necessary, please use soft dry cloth to wipe dirt; for hard contamination, use neutral detergent. Any cleanser for high grade furniture is applicable.
- Avoid aiming the camera directly towards extremely bright objects, such as, sun, as this may damage the image sensor.
- Please follow the instructions to install the camera. Do not reverse the camera, or the reversing image will be received.
- Do not operate it in case temperature, Relative humidity and power supply are beyond the limited stipulations.
- Keep away from heat sources such as radiators, heat registers, stove, etc.
- Do not expose the product to the direct airflow from an air conditioner.
- This is product instructions not quality warranty. We may reserve the rights of amending the typographical errors, inconsistencies with the latest version, software upgrades and product improvements, interpretation and modification. These changes will be published in the latest version without special notification.
- When this product is in use, the relevant contents of Microsoft, Apple and Google will be involved in. The pictures and screenshots in this manual are only used to explain the usage of our product. The ownerships of trademarks, logos and other intellectual properties related to Microsoft, Apple and Google belong to the above-mentioned companies.
- This manual is suitable for IR water-proof network camera. All pictures and examples used in the manual are for reference only.

# Disclaimer

- With regard to the product with internet access, the use of product shall be wholly at your own risks. Our company shall be irresponsible for abnormal operation, privacy leakage or other damages resulting from cyber attack, hacker attack, virus inspection, or other internet security risks; however, Our company will provide timely technical support if necessary.
- Surveillance laws vary from country to country. Check all laws in your local region before using this product for surveillance purposes. We shall not take the responsibility for any consequences resulting from illegal operations.

## FCC Marking

The products have be tested and found in compliance with the council FCC rules and regulations part 15 subpart B. Operation of this product is subject the following two conditions: (1) this device may not cause harmful interface, and (2) this device must accept any interference received, including interference that may cause undesired operation.

## **CE Marking**

**CE** The products have been manufactured to comply with the following directives. EMC Directive 2014/30/EU

## **RoHS Marking**

The products have designed and manufactured in accordance with Directive EU RoHS Directive 2011/65/EU and its amendment Directive EU 2015/863 on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

## **1** Introduction

This IP-CAMERA (short for IP-CAM) is designed for high performance CCTV solutions. It adopts state-of-the-art video processing chips, integrated with the most advanced technologies (like video encoding and decoding technology) to make the image transmission more stable and smooth. Moreover, the built-in WEB server of this series improves the performance of the traditional surveillance system so that users can be easy to operate and monitor.

This product is widely used in banks, telecommunication systems, electricity power departments, law systems, factories, storehouses, uptowns, etc. In addition, it is also an ideal choice for surveillance sites with middle or high risks.

#### **Main Features**

- ICR auto switch, true day/night
- 3D DNR, digital WDR, defog, BLC, HLC
- ROI coding
- Support smart phone, iPad, remote monitoring

#### Surveillance Application

Connect IP-Cam via LAN or WAN. Here only take IE browser for example. The details are as follows:

## 2.1 LAN

In LAN, there are two ways to access IP-Cam: 1. access through IP-Tool; 2. directly access through IE browser.

## 2.1.1 Access through IP-Tool

Network connection:

① Make sure the PC and IP-Cam are connected to the LAN and the IP-Tool is installed in the PC from the CD.

(2) Double click the IP-Tool icon on the desktop to run this software as shown below:

			Device N	Network S	earch				-!=!×
Immediate Refresh 🗸 🧻 About									
Device Name	Device Type	Product Model	IP Address	Http Port	Data Port	Subnet	Modify Networ	k Parameter	<b></b>
name	IPC	unknown	192.168.226.201	80	9008	255.255	Mac Address		
	IPC		192.168.1.2		9008	255.255.	IP Address	192.168.22	6.201
name	IPC		192.168.1.3	80	9008	255.255.	Subnet Mask	255.255.2	55.0
							Gateway	192.168.22	26.1
							• Tip: Enter the		
							Restore IPC De		
■ Total Device	: 3	Local IP Ad	dress:192.168.1.	4   Subnet Ma	ask:255.255.2	55.0   Ga	teway: 192.168.	1.1   DNS : 210	.21.196.6

③ Modify the IP address. The default IP address of this camera is 192.168.226.201. Click the information of the camera listed in the above table to show the network information on the right hand. Modify the IP address and gateway of the camera and make sure its network address is in the same local network segment as the computer's. Please modify the IP address

of your device according to the practical situation.

Modify Network Parameter 🛛 🔺		
Mac Address		
IPAddress	192.168. 1 .201	
Subnet Mask	255.255.255.0	
Gateway	192.168. 1 . 1	
	Modify	

For example, the IP address of your computer is 192.168.1.4. So the IP address of the camera shall be changed to 192.168.1.X. After modification, please enter the password of the administrator and click "Modify" button to modify the setting.

The default password of the administrator is "123456".

(4) Double click the IP address and then the system will pop up the IE browser to connect IP-CAM. Then follow directions to install and run the applicable plug-in.

	Name:	admin
	Password:	•••••
	Stream Type:	1920x1080 25fps
	Language:	English
		Remember me
- 1 marker		Login

Enter the username and password to log in.

Please change the default password X
Modify Password
New Password
Confirm Password
Do not show again OK Cancel

The system will pop up the above-mentioned textbox to ask you to change the default password. It is strongly recommended to change the default password for account security. If "Do not show again" is checked, the textbox will not appear next time.

#### 2.1.2 Directly Access through IE

The default network settings are as shown below:

IP address: 192.168.226.201 Subnet Mask: 255.255.255.0 Gateway: 192.168.226.1 HTTP: 80

#### Data port: 9008

Use the above default settings when logging in the camera for the first time. Directly connect the camera to the computer through the network cable.

(1) Manually set the IP address of the PC and the network segment should be as the same as the default settings of the IP camera. Open the network and share center. Click "Local Area Connection" to pop up the following window.

Select "Properties" and then select internet protocol according to the actual situation (for example: IPv4). Next, click "Properties" button to set the network of the PC.

Internet Protocol Version 4 (TCP/IPv4) Properties							
General							
You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.							
Obtain an IP address automatically							
Ouse the following IP address: -							
IP address:	192 . 168 . 226 . 4						
Subnet mask:	255.255.255.0						
Default gateway:	192 . 168 . 226 . 1						
Obtain DNS server address aut	omatically						
Ouse the following DNS server a	ddresses:						
Preferred DNS server:	192 . 168 . 226 . 1						
Alternate DNS server:							
Validate settings upon exit	Advanced						
	OK Cancel						

- ② Open the IE browser and enter the default address of IP-CAM and confirm.
- (3) Follow directions to download and install the Active X control.
- ④ Enter the default username and password in the login window and then enter to view.

## 2.2 WAN

#### > Access through the router or virtual server

① Make sure the camera is connected to the local network and then log in the camera via LAN and go to Config $\rightarrow$ Network $\rightarrow$ Port menu to set the port number.

HTTP Port	80
HTTPS Port	443
HTTPS POIL	443
Data Port	9008
RTSP Port	554

(2) Go to Config  $\rightarrow$  Network  $\rightarrow$  TCP/IPv4 menu to modify the IP address.

IPv4 IPv6 IP Chang	ge Notification Config						
$\bigcirc$ Obtain an IP address automatically							
• Use the following I	IP address						
IP Address	192.168.226.201						
Subnet Mask	255.255.255.0						
Gateway	192.168.226.1						
Preferred DNS Server	192.168.226.1						
Alternate DNS Server	8.8.8.8						
	Save						

(3) Go to the router's management interface through IE browser to forward the IP address and port of the camera in the "Virtual Server".

	Port Range					
Application	Start		End	Protocol	IP Address	Enable
1	9007	to	9008	Both 💌	192.168.1.201	
2	80	to	81	Both 💌	192.168.1.201	-
3	10000	to	10001	Both 👻	192.168.1.166	
4	21000	to	21001	Both 🔻	192.168.1.166	

#### **Router Setup**

④ Open the IE browser and enter its WAN IP and http port to access.

#### > Access through static IP

Network connection

The setup steps are as follow:

(1) Go to Config $\rightarrow$ Network $\rightarrow$ Port menu to set the port number.

② Go to Config →Network→TCP/IP menu to set the IP address. Check "Use the following IP

address" and then enter the static IP address and other parameters.

③ Open the IE browser and enter its WAN IP and http port to access.

# 3 Live View

After logging in, the following window will be shown.

The following table is the instructions of the icons on the live view interface.

Icon	Description	Icon	Description
$\times 1$	Original size	Ø	Zoom out
	Appropriate size	*	Motion alarm indicator icon
	Auto	*	Scene change indicator
	Full screen	۲	Abnormal clarity indicator
3	Start/stop live view	¢,	Color abnormal indicator
Ô	Snapshot		Line crossing indicator
	Start/stop record	0)	Intrusion indicator
Q	Zoom in		

• Those smart alarm indicators will flash only when the camera supports those functions and the corresponding events are enabled.

• In full screen mode, double click on the mouse to exit or press the ESC key on the keyboard.

## 4.1 System Configuration

#### 4.1.1 Basic Information

In the "Basic Information" interface, the system information of the device is listed.

Device Name	IPC
Product Model	IPC
Brand	Customer
Software Version	4.2.1.0(21144)
Software Build Date	2019-01-19
Kernel Version	20180824
Hardware Version	1.3-1412102
Onvif Version	16.12(#2)
OCX Version	2.0.4.1
MAC	00:18:ae:00:32:3f

#### 4.1.2 Date & Time

Go to Config $\rightarrow$ System $\rightarrow$ Date and Time. Please refer to the following interface.

Select the time zone and DST as desired.

Click the "Date and Time" tab to set the time mode.

Zone Date and Time	
Time Mode:	
Synchronize with NTP server	
NTP server: time.windows.com	Update period : 30 Minutes
Synchronize with computer time	
Date 2017-07-29 Time 14:43:26	
Set manually	
Date 2017-07-29 IIII Time 14:41:53	

## 4.1.3 Local Configuration

Go to Config $\rightarrow$ System $\rightarrow$ Local Config to set up the storage path of captured pictures and recorded videos on the local PC. There is also an option to enable or disable the bitrate display in the recorded files.

Save snapshots to	D:\Favorites	Browse
Save recording files to	D:\Favorites	Browse
Bitrate Overlay	Open     Close	

## 4.2 Image Configuration

Image Configuration includes five submenus: Display, Video/Audio, OSD, Video Mask and ROI Config.

## 4.2.1 Display Configuration

Go to Image  $\rightarrow$  Display interface as shown below. The image's brightness, contrast, hue and saturation and so on for common, day and night mode can be set up separately. The image effect can be quickly seen by switching the configuration file.

Camera Parameters Schedule			
	Config File Com	mon	
a support	Brightness	25	
	Contrast		
	Hue		
	Saturation	<u>50</u>	
and the second s	WDR 🗐	128	
ULUUUUUUU	Sharpness 📃	-0-50	
	Noise Reduction		
	Defog	-0-50	
	BLC	Off	
	Antiflicker	Off	
	White Balance	Auto	
	Frequency	50HZ	
	Day/Night Mode	Auto	
	Sensitivity	Mid	
	Delay Time(Second)	۰	
	Infra-red Mode	Auto	
	Exposure Mode	Auto	
	Gain Limit	50	
	Image Mirror	Open Open	
	Image Flip	Open Open	
		Default Revoke	

Brightness: Set the brightness level of the camera's image.

Contrast: Set the color difference between the brightest and darkest parts.

Hue: Set the total color degree of the image.

Saturation: Set the degree of color purity. The purer the color is, the brighter the image is.

**WDR**: WDR can adjust the camera to provide a better image when there are both very bright and very dark areas simultaneously in the field of the view by lowering the brightness of the bright area and increasing the brightness of the dark area.

Sharpness: Set the resolution level of the image plane and the sharpness level of the image edge.

**Noise Reduction**: Decrease the noise and make the image more thorough. Increasing the value will make the noise reduction effect better but it will reduce the image resolution.

**Defog:** Activating this function and setting an appropriate value as needed in foggy, dusty, smoggy or rainy environment to get clear images.

#### Backlight Compensation (BLC):

- Off: disables the backlight compensation function. It is the default mode.
- HLC: lowers the brightness of the entire image by suppressing the brightness of the image's bright area and reducing the size of the halo area.
- BLC: If enabled, the auto exposure will activate according to the scene so that the object of the image in the darkest area will be seen clearly.

#### Antiflicker:

- Off: disables the anti-flicker function. This is used mostly in outdoor installations.
- 50Hz: reduces flicker in 50Hz lighting conditions.
- 60Hz: reduces flicker in 60Hz lighting conditions.

White Balance: Adjust the color temperature according to the environment automatically.

Frequency: 50Hz and 60Hz can be optional.

Day/night Mode: Please choose the mode as needed.

**Sensitivity**: High, middle and low can be selected for switching back and forth from day to night modes.

Infrared Mode: Choose "ON", "OFF" and "Auto" (Some models may not support the infrared mode).

**Exposure Mode**: Choose "Auto" or "Manual". If manual is chosen, the digital shutter speed can be adjusted.

Gain Limit: The higher the gain value is, the higher the brightness of the image is and the more noises of the image are.

Image Mirror: Turn the current video image horizontally.

Image Flip: Turn the current video image vertically.

Schedule Settings of Image Parameters:

Click the "Schedule" tab as shown below.

Camera Parameters	Schedule	
Schedule	Full Time	~
Config File	Common	~

Set full time schedule for common, day, night mode and specified time schedule for day and night. Choose "Schedule" in the drop-down box of schedule as shown below.

Camera Parame	ters Schedule	2					
Schedule	Schedule		~				
Time Range							
	0:00	4:00	8:00	12:00	16:00	20:00	24:00
	Day	Night				S	ave

Drag " )" icons to set the time of day and night. Blue means day time and blank means night time. If the current mode of camera parameters is set to schedule, the image configuration mode will automatically switch between day and night according to the schedule.

#### 4.2.2 Video Stream

The following interface will be displayed by clicking Config →Image→Video/Audio.

ndex	Stream Name	Resolution	Frame Rate	Bitrate Type	Bitrate(Kbps)	Video Quality	I Frame	Video	Profile
1	Main stream	1920x1080 ¥	25	CBR 🗸	3072 💙	Highest 🗸	100	H264 🗸	High Profile 🗸
2	Sub stream	352x288 🗸	25	CBR 🗸	512 ~	Highest 🗸	100	H264 🗸	High Profile 🗸

Two video streams can be adjustable.

Resolution: The size of image.

Frame rate: The higher the frame rate, the video is smoother.

**Bitrate type**: CBR and VBR are optional. Bitrate is related to image quality. CBR means that no matter how much change is seen in the video scene, the compression bitrate will be kept constant. VBR means that the compression bitrate will be adjusted according to scene changes. For example, for scenes that do not have much movement, the bitrate will be kept at a lower value. This can help optimize the network bandwidth usage.

**Bitrate**: it can be adjusted when the mode is set to CBR. The higher the bitrate, the better the image quality will be.

**Video Quality**: It can be adjusted when the mode is set to VBR. The higher the image quality, the more bitrate will be required.

**I Frame interval**: It determines how many frames are allowed between a "group of pictures". When a new scene begins in a video, until that scene ends, the entire group of frames (or pictures) can be considered as a group of pictures. If there is not much movement in the scene, setting the value higher than the frame rate is fine, potentially resulting in less bandwidth usage. However, if the value is set too high, and there is a high frequency of movement in the video, there is a risk of frame skipping.

Video Compression: H264/H265/MJPEG can be selected.

Profile: For H.264. Baseline, main and high profiles are selectable.

Send Snapshot: How many snapshots to generate for an event.

**Video encode slice split**: If this function is enabled, smooth image can be gotten even though using the low-performance PC.

**Watermark**: When playing back the local recorded video in the search interface, the watermark can be displayed. To enable it, check the watermark box and enter the watermark text.

#### 4.2.3 OSD Configuration

Go to Config $\rightarrow$ Image $\rightarrow$ OSD menu to display the interface as shown below:

Date Format	YYYY-MM-DD 🗸
	Show Timestamp
Device Name	IPC
	□ Show Device Name
□ OSD Content	

Time stamp, device name and OSD can be set up here. After enabling the corresponding display and entering the content, drag them to change their position. Then press the "Save" button to save the settings.

## 4.2.4 Video Mask

Go to Config $\rightarrow$ Image $\rightarrow$ Video Mask menu to display the interface as shown below. A maximum of 4 zones can be set up.

To set up video mask

- 1. Enable video mask.
- 2. Click the "Draw Area" button and then drag the mouse to draw the video mask area.
- 3. Click the "Save" button to save the settings.

4. Return to the live to verify that the area have been drawn as shown as blocked out in the image.

To clear the video mask:

Click the "Clear" button to delete the current video mask area.

## 4.2.5 ROI Configuration

Go to Image  $\rightarrow$  ROI Config interface as shown below. An area in the image can be set as a region of interest. This area will have a higher bitrate than the rest of the image, resulting in better image quality for the identified area.

#### To set up ROI

- 1. Check "Enable" and then click the "Draw Area" button.
- 2. Drag the mouse to set the ROI area.
- 3. Set the level.
- 4. Click the "Save" button to save the settings.

## 4.3 Alarm Configuration

## 4.3.1 Motion Detection

To set motion detection:

1. Go to Config  $\rightarrow$  Alarm  $\rightarrow$  Motion Detection to set motion detection alarm.

Check "Enable" check box to activate motion based alarms. If unchecked, the camera will not send out any signals to trigger motion-based recording to the NVR or CMS, even if there is motion in the video.

**Trigger Email**: If "Trigger Email" and "Attach Picture" are checked (email address must be set first in the Email configuration interface), the captured pictures and triggered event will be sent into those addresses.

Alarm Config	Area and Sensitivity	Schedule
🗵 Enable		
Alarm Holding	Time 20 Seconds	~
🗹 Trigger Em	ail	
Email Recipi	ent(s)	Attach Picture
Email Subj	ect	
Email Cont	tent	
	Save	

2. Set motion detection area and sensitivity. Click the "Area and Sensitivity" tab to go to the interface as shown below.

Move the "Sensitivity" scroll bar to set the sensitivity. Higher sensitivity value means that motion will be triggered more easily.

Select "Add" and click "Draw". Drag the mouse to draw the motion detection area; Select "Erase" and drag the mouse to clear motion detection area.

After that, click the "Save" to save the settings.

3. Set the schedule of the motion detection. Click "Schedule" to go to the motion schedule setting interface as shown below.

#### Weekly schedule

Set the alarm time from Monday to Sunday for a single week. Each day is divided in one hour increments. Green means scheduled. Blank means unscheduled.

"Add": Add the schedule for a special day. Drag the mouse to set the time on the timeline.

"Erase": Delete the schedule. Drag the mouse to erase the time on the timeline.

Manual Input: Click it for a specific day to enter specific start and end times. This adds more

granularities (minutes).

#### Day schedule

Set the alarm time for alarm a special day, such as a holiday. Note: Holiday schedule takes priority over weekly schedule.

## 4.3.2 Alarm Server

Go to Alarm $\rightarrow$ Alarm Server interface as shown below.

Set the server address, port, heartbeat and heartbeat interval. When an alarm occurs, the camera will transfer the alarm event to the alarm server. If an alarm server is not needed, there is no need to configure this section.

Server Address		
Port	0	
Heartbeat	Disable	~
Heartbeat interval	30	Second

## 4.4 Event Configuration (Optional)

#### (Only some specified versions support the following functions).

For more accuracy, here are some recommendations for installation.

- Cameras should be installed on stable surfaces, as vibrations can affect the accuracy of detection.
- Avoid pointing the camera at the reflective surfaces (like shiny floors, mirrors, glass, lake surfaces and so on).
- Avoid places that are narrow or have too much shadowing.
- Avoid scenario where the object's color is similar to the background color.
- At any time of day or night, please make sure the image of the camera is clear and with adequate and even light, avoiding overexposure or too much darkness on both sides.

## 4.4.1 Exception

This function can detect changes in the surveillance environment affected by the external factors.

To set exception detection:

Go to Config $\rightarrow$ Event $\rightarrow$ Exception interface as shown below.

1. Enable the applicable detection that's desired.

Scene Change Detection: Alarms will be triggered if the scene of the monitor video has changed.

Video Blur Detection: Alarms will be triggered if the video becomes blurry.

Enable Video Color Cast Detection: Alarms will be triggered if the video becomes obscured.

2. Set the alarm holding time and choose whether to trigger Email.

3. Click "Save" to save the settings.

4. Set the sensitivity of the exception detection. Click the "Sensitivity" tab to go to the interface as shown below.

Detection Co	onfiguration	Sensitivity	
Sensitivity		28	
			Save

Drag the slider to set the sensitivity value or directly enter the sensitivity value in the textbox. Click "Save" button to save the settings.

**The sensitivity value of Scene Change Detection**: The higher the value is, the more sensitive the system responds to the amplitude of the scene change.

**The sensitivity value of Video Blur Detection**: The higher the value is, the more sensitive the system responds to the blurriness of the image.

**The sensitivity value of Video Color Cast Detection**: The higher the value is, the more sensitive the system responds to the obscuring of the image.

#### **%** The requirements of camera and surrounding area

- 1. Auto-focusing function should not been enabled for exception detection.
- 2. Try not to enable exception detection when light changes greatly in the scene.
- 3. Please contact us for more detailed application scenarios.

#### 4.4.2 Line Crossing

**Line Crossing**: Alarms will be triggered if someone or something crosses the pre-defined alarm lines. It can replace the electronic fence, warning line of flood prevention, etc. Go to Config  $\rightarrow$  Event  $\rightarrow$  Line Crossing interface as shown below.

Detection Config Area	Schedule
Enable	
Alarm Holding Time	20 Seconds 🗸
Trigger Email	
	Save

- 1. Enable line crossing alarm.
- 2. Set the alarm holding time and choose whether to trigger Email.
- 3. Click "Save" to save the settings.

4. Set area and sensitivity of the line crossing alarm. Click the "Area and Sensitivity" tab to go to the interface as shown below.

Set the alarm line number and direction. Up to 4 lines can be added. Multiple lines cannot be added simultaneously.

**Direction:** A<->B, A->B and A<-B are optional. This indicates the direction of the intruder who crosses over the alarm line that would trigger the alarm.

A<->B: The alarm will be triggered when the intruder crosses over the alarm line from B to A or from A to B.

**A->B**: The alarm will be triggered when the intruder crosses over the alarm line from A to B. **A<-B**: The alarm will be triggered when the intruder crosses over the alarm line from B to A.

Click "Draw Area" and then drag the mouse to draw a line in the image. Click "Stop Draw" to stop drawing. Click "Clear" to delete the lines. Click "Save" to save the settings.

5. Set the schedule of the line crossing alarm. The setup steps of the schedule are the same as motion detection schedule setup (See <u>Motion Detection</u> chapter for details).

#### **%** Configuration of camera and surrounding area

1. Auto-focusing function should not be enabled for line crossing detection.

2. Avoid the scenes with many trees or the scenes with various light changes (like many flashing headlights). The ambient brightness of the scenes shouldn't be too low.

3. Cameras should be mounted at a height of 2.8 meters or above.

4. Keep the mounting angle of the camera at about 45 °.

5. The detected objects should not be less than 1% of the entire image and the largest sizes of the detected objects should not be more than 1/8 of the entire image.

6. Make sure cameras can view objects for at least 2 seconds in the detected area for accurate detection.

7. Adequate light and clear scenery are crucial for line crossing detection.

8. Please contact us for more detailed application scenarios.

Here we take some improper application scenarios for instance.

There are so many trees near the road and cars running on the road, which make the scene too complex to detect the crossing objects.

The ground is covered with vegetation; at the right of the fence is a gym where people pass by frequently. The above mentioned environment is too complex to detect the crossing objects.

## 4.4.3 Intrusion

**Intrusion**: Alarms will be triggered if someone or something intrudes into the pre-defined areas. This function can be applicable to important supervision places, danger areas and prohibited areas, like military administrative zones, house breaking, scenic high danger areas,

#### no man's areas, etc.

Go to Config $\rightarrow$ Event $\rightarrow$ Intrusion interface as shown below.

Detection Config Area	Schedule
Inable	
Alarm Holding Time	20 Seconds 🗸
Trigger Email	
	Save

- 1. Enable region intrusion detection alarm.
- 2. Set the alarm holding time and choose whether to trigger Email.
- 3. Click "Save" to save the settings.

4. Set the alarm area of the intrusion detection. Click the "Area" tab to go to the interface as shown below.

Detection Config Area	Schedule			
		Alarm Area	1	v
Draw Area Clea	ar			Save

Set the alarm area number on the right side. Up to 4 alarm areas can be added.

Click "Draw Area" and then click around the area where you want to set as the alarm area in the image on the left side (the alarm area should be a closed area). Click "Stop Draw" to stop drawing. Click "Clear" to delete the alarm area. Click "Save" to save the settings.

5. Set the schedule of the intrusion detection. The setup steps of the schedule are the same as motion detection schedule setup (See <u>Motion Detection</u> chapter for details).

#### X Configuration requirements of camera and surrounding area

1. Auto-focusing function should not be enabled for intrusion detection.

2. Avoid the scenes with many trees or the scenes with various light changes (like many flashing headlights). The ambient brightness of the scenes shouldn't be too low.

- 3. Cameras should be mounted at a height of 2.8 meters or above.
- 4. Keep the mounting angle of the camera at about 45 °.

5. The detected objects should not be less than 1% of the entire image and the largest sizes of the detected objects should not be more than 1/8 of the entire image.

6. Make sure cameras can view objects for at least 2 seconds in the detected area for accurate detection.

7. Adequate light and clear scenery are crucial to line crossing detection.

8. Please contact us for more detailed application scenarios.

Here we take some improper application scenarios for instance.

The camera's angle of depression is not wide enough; there are so many trees in the scene. The above mentioned environment is too complex to detect the intrusion.

The camera's angle of depression is not wide enough; the street lamps at night lead to light interference; the swaying trees in a windy day lead to random interference. All the above mentioned factors make the scene improper for intrusion detection.

# 4.5 Network Configuration

## 4.5.1 TCP/IP

Go to Config $\rightarrow$ Network $\rightarrow$ TCP/IP interface as shown below. There are two ways for network connection.

IPv4 IPv6 IP Chan	ge Notification Config	
Obtain an IP address automatically		
• Use the following IP address		
IP Address	192.168.226.201	
Subnet Mask	255.255.255.0	
Gateway	192.168.226.1	
Preferred DNS Server	192.168.226.1	
Alternate DNS Server	8.8.8.8	
	Save	

Use IP address (take IPv4 for example)-There are two options for IP setup: obtain an IP address automatically by DHCP and use the following IP address. Please choose one of the options as needed.

Click "IP Change Notification Config" to go to the interface as shown below.

**Trigger Email**: when the IP address of the device is changed, a new IP address will be sent to the appointed mailbox automatically.

**PPPoE Settings:** Click the "PPPoE Config" tab to go to the interface as shown below. Enable PPPoE and then enter the user name and password from your ISP.

#### 4.5.2 Port

Go to Config $\rightarrow$ Network $\rightarrow$ Port. HTTP port, Data port and RTSP port can be set.

HTTP Port	80
HTTPS Port	443
Data Port	9008
RTSP Port	554

HTTP Port: The default HTTP port is 80. It can be changed to any port which is not occupied. HTTPs Port: Optional. The default HTTP port is 443. It can be changed to any port which is not occupied.

Data Port: The default data port is 9008. It can be changed to any port which is not occupied. RTSP Port: The default port is 554. It can be changed to any port which is not occupied.

#### 4.5.3 Server Configuration

This function is mainly used for connecting network video management system.

Enable	
Server Port	0
Server Address	
Device ID	1

1. Check "Enable".

2. Check the IP address and auto report port of the transfer media server in the ECMS/NVMS. Then enable the auto report in the ECMS/NVMS when adding a new device. Next, input the remaining information of the device in the ECMS/NVMS. After that, the system will auto allot a device ID. Please check it in the ECMS/NVMS.

3. Input the above-mentioned server address, server port and device ID in the responding boxes. Click "Save" button to save the settings.

#### 4.5.4 DDNS Configuration

If the camera is set up with a DHCP connection, DDNS should be set for the internet.

1. Go to Config  $\rightarrow$  Network  $\rightarrow$  DDNS.

🗹 Enable	
Server Type	mintdns 💌
Server Address	www.dvrdydns.com
User Name	
Password	
Domain	

2. Apply for a domain name. Take www. dvrdyndns.com for example. Input www.dvrdydns.com in the IE address bar to visit its website. Then click "Registration" button.

NEW USER REGISTRATION	
USER NAME	XXXX
PASSWORD	•••••
PASSWORD CONFIRM	•••••
FIRST NAME	XXX
LAST NAME	ХХХ
SECURITY QUESTION.	My first phone number.
A N S W E R	XXXXXXX
CONFIRM YOU'RE HUMAN	New Captcha Enter the text you see above
٦	Submit Reset

Create domain name.

You must create a domain name to continue.	
Domain name must start with (a-z, 0-9). Cannot end or start, but may is not case-sensitive.	contain a hyphen and
dvrdydns.com V Request Domain	

After the domain name is successfully applied for, the domain name will be listed as below.

Search by Domain. Search		
		Click a name to edit your domain settings.
NAME	STATUS	DOMAIN
6 5 4 3 2 1 A B C	Ø	654321abc.dvrdydns.com
Last Update: Not yet updated IP Address: 210.21.229, 138  Create additional domain named		

Input the username, password, domain you apply for in the DDNS configuration interface.
 Click "Save" button to save the settings.

#### 4.5.5 802.1x

IEEE802.X is an access control protocol. The setting steps are as follows:

✓ Enable	
Protocol Type	EAP_MD5
EAPOL Version	1 ~
User Name	test
Password	•••••
Confirm Password	•••••

To use this function, the camera shall be connected to a switch supporting 802.1x protocol. The switch can be reckoned as an authentication system to identify the device in a local network. If the camera connected to the network interface of the switch has passed the authentication of the switch, it can be accessed via the local network.

Protocol type and EAPOL version: Please use the default settings.

User name and password: The user name and password must be the same with the user name and password applied for and registered in the authentication server.

The structure of 802.1x

① The network camera initiates the authentication of 802.1x protocol via web client and then the authentication is received by the switch supporting 802.1x protocol.

2 The switch provides the camera with a physical or logic local network interface and verifies the camera.

③ Authentication server provides the entity of authentication service for the switch, stored the relative information of web client, realizing the authentication of web client.

Please refer to the user manual of the connected switch for more details.

## 4.5.6 RTSP

Go to Config $\rightarrow$ Network $\rightarrow$ RTSP.

Port Server	DDNS 802.1X RTSP UPnP Email HTTPS QoS		
🗹 Enable			
Port	554		
Address	ddress rtsp://IP or domain name:port/profile1		
rtsp://IP or domain name:port/profile2			
Multicast add	ress		
Main stream	239.0.0.0 50554 Automatic start		
Sub stream	239.0.0.1 51554 Automatic start		
Allow anonymous login (No username or password required)			
	Save		

Select "Enable" to enable the RTSP function.

Port: Access port of the streaming media. The default number is 554.

**RTSP Address: RTSP Address:** The RTSP address (unicast) format that can be used to play the stream in a media player.

#### **Multicast Address**

Main stream: The address format is

"rtsp://IP address: rtsp port/profile1?transportmode=mcast".

Sub stream: The address format is

"rtsp://IP address: rtsp port/profile2?transportmode=mcast".

If "Allow anonymous login..." is checked, there is no need to enter the username and password to view the video.

If "auto start" is enabled, the multicast received data should be added into a VLC player to play the video.

**Note:** 1. This camera support local play through a VLC player. Enter the RTSP address (unicast or multicast, eg. rtsp://192.168.226.201:554/profile1?transportmode=mcast) in a VLC player to realize the simultaneous play with the web client.

2. The IP address mentioned above cannot be the address of IPV6.

3. Avoid the use of the same multicast address in the same local network.

4. When playing the video through the multicast streams in a VLC player, please pay attention to the mode of the VLC player. If it is set to TCP mode, the video cannot be played.

5. If the coding format of the video of the main stream is MJPEG, the video may be disordered at some resolutions.

#### 4.5.7 UPNP

If this function is enabled, the camera can be quickly accessed through the LAN. Go to Config $\rightarrow$ Network $\rightarrow$ UPnP. Enable UPNP and then enter UPnP name.

🗆 Enable	
UPnP Name	

#### 4.5.8 Mail Configuration

If you need to trigger Email when an alarm happens or IP address is changed, please set the Email here first.

Go to Config $\rightarrow$ Network  $\rightarrow$ Email.

Port Server DDN	S SNMP RTSP UPnP Email FTP
Sender	
Sender Address	XXX@126.com
User Name	XXX@126.com
Password	•••••
Server Address	smtp.126.com
Secure Connection	Unnecessary V
SMTP Port	25 Default
Send Interval(S)	0 (0-3600)
	Clear Test
Recipient	
XXXX@126.com	
Recipient Address	
	Add Delete
	Save

Sender Address: sender's e-mail address.

User name and password: sender's user name and password.

Server Address: The SMTP IP address or host name.

Select the secure connection type at the "Secure Connection" pull-down list according to what's required.

**SMTP Port**: The SMTP port.

**Send Interval(S)**: The time interval of sending email. For example, if it is set to 60 seconds and multiple motion detection alarms are triggered within 60 seconds, they will be considered as only one alarm event and only one email will be sent. If one motion alarm event is triggered and then another motion detection alarm event is triggered after 60 seconds, two emails will be sent. When different alarms are triggered at the same time, multiple emails will be sent separately.

Click the "Test" button to test the connection of the account.

Recipient Address: receiver's e-mail address.

#### 4.5.9 HTTPS

HTTPs provides authentication of the web site and protects user privacy. Go to Config Config  $\rightarrow$  Network  $\rightarrow$  HTTPS as shown below.

✓ Enable	
Certificate installed	C=CN, ST=GD, L=SZ, O=embeddedsoftewar Delete
Attribute	Issued to: C=CN, ST=GD, L=SZ, O=embeddedsofteware, OU=IPC, H=localhost, E=com.cn, Issuer: C=CN, ST=GD, L=SZ, O=embeddedsofteware, OU=IPC, H=localhost, E=com.cn, Validity date: 2017-07-26 01:02:07 ~ 2022-07-26 01:02:07
	Save

There is a certificate installed by default as shown above. Enable this function and save it. Then the camera can be accessed by entering https://IP: https port via the web browser (eg. https://192.168.226.201:443).

A private certificate can be created if users don't want to use the default one. Click "Delete" to cancel the default certificate. Then the following interface will be displayed.

Enable		
Installation type	$\ensuremath{ \bullet }$ Have signed certificate, install directly	
	$\bigcirc$ Create a private certificate	
	$\bigcirc$ Create a certificate request	
Install certificate		Browse Install
		Save

\* If there is a signed certificate, click "Browse" to select it and then click "Install" to install it. \* Click "Create a private certificate" to enter the following creation interface.

Enable		
Installation type	$\bigcirc$ Have signed certificate, install directly	
	<ul> <li>Create a private certificate</li> </ul>	
	○ Create a certificate request	
Create a private certificate	e Create	
		Save

Click the "Create" button to create a private certificate. Enter the country (only two letters available), domain (camera's IP address/domain), validity date, password, province/state, region and so on. Then click "OK" to save the settings.

\* Click "Create a certificate request" to enter the following interface.

Enable	
Installation type	$\bigcirc$ Have signed certificate, install directly
	$\bigcirc$ Create a private certificate
	<ul> <li>Create a certificate request</li> </ul>
Create a certificate reques	t Create Download Delete

Click "Create" to create the certificate request. Then download the certificate request and submit it to the trusted certificate authority for signature. After receiving the signed certificate, import the certificate to the device.

#### 4.5.10 QoS

QoS (Quality of Service) function is used to provide different quality of services for various network applications. Under the deficient bandwidth, the router or switch will sort the data streams and transfer them according to their priority to solve the network delay and network congestion by using this function.

Go to Config $\rightarrow$ Network $\rightarrow$ QoS.

Video/Audio DSCP	13
Alarm DSCP	35
Manager DSCP	53

Video/Audio DSCP: The range is from 0 to 63.

Alarm DSCP: The range is from 0 to 63.

Manager DSCP: The range is from 0 to 63.

Generally speaking, the larger the number is, the higher the priority is.

## 4.6 Security Configuration

## 4.6.1 User Configuration

Go to Config $\rightarrow$ Security.

Ade	d Modify Delet	e	
Index	User Name	User Type	Binding MAC
1	admin	Administrator	

#### Add user:

1. Click "Add" button to pop up the following textbox.

Add User		×
User Name		
Password		
Confirm Password		
User Type	Administrator	*
Binding MAC	00:00:00:00:00:00	
	ОК	Cancel

2. Enter user name in "User Name" textbox.

3. Enter letters or numbers in "Password" and "Confirm Password" textbox.

4. Choose the user type. Administrator has all permissions. Normal user can only view the live video. Advanced user has the same permissions as an Administrator except for user, backup settings, factory reset, and upgrading the firmware.

5. Enter the MAC address of the PC in "Bind MAC" textbox.

If this option is enabled, only the PC with the specified MAC address can access the camera for that user.

6. Click the "OK" button and then the newly added user will be displayed in the user list.

### Modify user:

1. Select a user to modify password and MAC address if necessary in the user configuration list box.

2. The "Edit user" dialog box pops up by clicking the "Modify" button.

E	dit User		×
	Modify Password	1	
	User Name	admin	
	Old Password		
	New Password		
	Confirm Password		
	Binding MAC	00:00:00:00:00:00	
		ОК	Cancel

3. Enter the old password of the user in the "Old Password" text box.

4. Enter the new password in the "New password" and "Confirm Password" text box.

- 5. Enter computer's MAC address as necessary.
- 6. Click the "OK" button to save the settings.

**Note**: To change the access level of a user, the user must be deleted and added again with the new access level.

Delete user:

- 1. Select the user to be deleted in the user configuration list box.
- 2. Click the "Delete" button to delete the user.

Note: The default administrator account cannot be deleted.

### 4.6.2 Online Video User

Go to Config $\rightarrow$ Security $\rightarrow$ Online User to view the user who is viewing the live video.

## 4.6.3 Block and Allow List

Go to Config $\rightarrow$ Security $\rightarrow$ Block and Allow Lists.

The setup steps are as follows:

Check the "Enable address filtering" check box.

Select "Block/Allow the following address", IPv4/IPv6/MAC and then enter IP address or MAC address in the address box and click the "Add" button.

## 4.6.4 Security Management

Go to Config $\rightarrow$ Security $\rightarrow$ Security Management as shown below.

In order to prevent against malicious password unlocking, "locking once illegal login" function can be enabled here. If this function is enabled, login failure after trying six times will make the login interface locked. The camera can be logged in again after a half hour or after the camera reboots.

For some specified versions, anonymous login with a private protocol can be enabled here (if your camera has no such function, please skip the following instructions). If this function is enabled, enter http://host:port/Anonymous/1[2/3] (eg.

http://192.168.226.201:80/Anonymous/1) via web browser to access the camera. 1 indicates main stream; 2 indicates sub stream; 3 indicates third stream. Only video can be viewed by this means and no other operations can be done.

# 4.7 Maintenance Configuration

## 4.7.1 Backup and Restore

Go to Config→Maintenance→Backup & Restore.

Import Setting		
Path		Browse
	Import Setting	
Export Settin	igs	
	Export Settings	
Default Setti	ngs	
Кеер	<ul> <li>Network Config</li> <li>Security Configuration</li> <li>Image Configuration</li> </ul>	
	Load Default	

#### • Import & Export Settings

Configuration settings of the camera can be exported form a camera into another camera.

- 1. Click "Browse" to select the save path for import or export information on the PC.
- 2. Click the "Import Setting" or "Export Setting" button.

### • Default Settings

Click the "Load Default" button to restore all system settings to the default factory settings except those you want to keep.

## 4.7.2 Reboot

Go to Config $\rightarrow$ Maintenance $\rightarrow$ Reboot.

Click the "Reboot" button to reboot the device.

### **Timed Reboot Setting:**

If necessary, the camera can be set up to reboot on a time interval. Enable "Time Settings", set the date and time and then Click the "Save" button to save the settings.

## 4.7.3 Upgrade

Go to Config→Maintenance→Upgrade. In this interface, the camera firmware can be updated.

Г	
Local upgrade	
Path	Browse Upgrade

- 1. Click the "Browse" button to select the save path of the upgrade file
- 2. Click the "Upgrade" button to start upgrading the firmware.
- 3. The device will restart automatically

Caution! Do not close the browser or disconnect the camera from the network during the upgrade.

## 4.7.4 Operation Log

To query and export log:

1. Go to Config→Maintenance→Operation Log.

Main Ty Start Tim		Sub Ty 0:00 End Ti		▼ 3:59:59 🗰 Se	arch Export
Index	Time	Main Type	Sub Type	User Name	Login IP
1	2015-07-14 11:15:18	Operation	Log in	admin	192.168.12.53
2	2015-07-14 11:12:02	Exception	Disconnected		192.168.12.53
3	2015-07-14 19:12:17	Exception	Disconnected		192.168.12.52

- 2. Select the main type, sub type, start and end time.
- 3. Click "Search" to view the operation log.
- 4. Click "Export" to export the operation log.

## 5.1 Image Search

Click Search to go to the interface as shown below.

- 1. Choose "Picture"—"Local".
- 2. Set time: Select date and choose the start and end time.
- 3. Click  $\square$  to search the images.
- 4. Double click a file name in the list to view the captured photos as shown above.

Click to return to the previous interface.

The descriptions of the buttons are shown as follows.

Icon	Description	Icon	Description
$\mathbb{A}$	Close: Select an image and click this button to close the image.	$\mathbb{A}_{\otimes}$	Close all: Click this button to close all images.
▼ ▶ <u>1:1</u> ↓	Fit size: Click to fit the image on the screen.	×1	Actual size: Click this button to display the actual size of the image.
(+)	Zoom in: Click this button to digitally zoom in.	$\Theta$	Zoom out: Click this button to digitally zoom out.
$\triangleright$	Slide show play: Click this button to start the slide show mode.		Stop: Click this button to stop the slide show.
S.55	Play speed: Play speed of the slide show.		

# 5.2 Video Search

Click Search to go to the interface as shown below. Videos were recorded locally to the PC can be played in this interface.

- 1. Choose "Record"—"Local".
- 2. Set search time: Select the date and choose the start and end time.
- 3. Click  $\bigcirc$  to search the images.
- 4. Double click on a file name in the list to start playback.

## Appendix 1 Q & A

#### Q: How to find my password if I forget it?

A: Reset the device to the default factory settings. Default IP: 192.168.226.201 User name: admin Password: 123456

#### Q: Fail to connect devices through IE browser, why?

A: Network is not well connected. Please check the connection and make sure it is connected well.

B: IP is not available. Reset the valid IP.

C: Web port number has been revised: contact administrator to get the correct port number.

D: Exclude the above reasons. Recover default setting by IP-Tool.

Note: Default IP: 192.168.226.201, mask number: 255.255.255.0

#### Q: IP tool cannot search devices, why?

A: It may be caused by the anti-virus software in your computer. Please exit it and try to search device again.

#### Q: IE cannot download ActiveX control. How can I do?

a. IE browser blocks ActiveX. Please try as below.

① Open IE browser. Click Tools-----Internet Options....

- 2 Select Security-----Custom Level....
- ③ Enable all the sub options under "ActiveX controls and plug-ins".

Internet Options	Security Settings
General Security Privacy Content Connections Programs Advanced Select a Web content zone to specify its security settings.	Settings: Enable Download signed ActiveX controls Disable Prompt Download unsigned ActiveX controls Disable Download unsigned ActiveX controls Disable
Internet This zone contains all Web sites you This zone contains all Web sites you Sites Security level for this zone	
Custom Custom settings: - To change the settings, click Custom Level. - To use the recommended settings, click Default Level. Custom Level Default Level	Reset to: Medium Reset
OK Cancel Apply	OK Cancel

- ④ Then click OK to finish setup.
- b. Other plug-ins or anti-virus blocks ActiveX. Please uninstall or close them.

# Appendix 2 Specifications

Specification /Model		IR Water-proof Bullet	IR Water-proof Bullet		
		Network Camera	Network Camera		
Image Sensor		1/2.9 " CMOS			
	Image Size	1920×1080			
	Electronic Shutter	1/25s~1/100000s			
	Iris Type	Fixed Iris			
	Min. llumination	0.03lux@F2.5, AGC ON; 0 lux with IR 0.007lux@F1.2, AGC ON; 0 lux with IR			
Camera	Lens	2.8mm@F2.0, horizontal field of view:108.2 ° 3.6mm@F2.4, horizontal field of view: 88 °	2.8mm@F2.0, horizontal field of view:108.2 ° 3.6mm@F2.4, horizontal field of view: 88 ° 6mm@F1.6, horizontal field of view: 52.3 °		
	Lens Mount	M12			
	Day&Night	ICR			
	WDR	Digital WDR			
	Digital NR	3D DNR			
		Pan: 0 °~360 °, Tilt: 0 °~80 °, Rotation:	Pan: 0 °~360 °, Tilt: 0 °~90 °, Rotation:		
	Angle Adjustment	0 °~360 °	0 °~360 °		
	Video Compression	H.264/H.265/MJPEG			
	Н.265 Туре	Main Profile @Leve4.1 High Tier			
	Video Bit Rate	128Kbps~4Mbps			
	Resolution	1080P (1920 × 1080), 720P (1280 × 720), D1, CIF, 480 × 240			
Image	Main Stream	60Hz: 1080P/720P(1~30fps); 50Hz: 1080P /720P(1~25fps)			
	Sub Stream	60Hz: D1/CIF/480×240 (1~30fps) 50Hz: D1/CIF/480×240 (1~25fps) Saturation, Brightness, Chroma, Contrast, Wide Dynamic, Sharpen, NR, Defog, BLC,			
	Image Settings	HLC, etc. adjustable through client or web browser			
	ROI	Support			
Interfaces	Network	RJ45
